I have been using Macintosh computers since system 6. I am quite capable at both hardware and software diagnostics.

I started using Capture One software at version 2.6. I am now using version 7.

I began using Photoshop at version 2.0. I am now using CS 6. Most of Mollie's clients did not require us to retouch images. I was just responsible for exposure, levels and color balance (around 300 select images per day). My Photoshop experience pertained mostly to her portfolio and the few portraits we shot each year.
